James Orengo
Governor, Siaya County

PREFACE

The Siaya International Trade and Investment Conference represents a pivotal moment in our shared journey toward socio-economic transformation and sustainable development. As Siaya County opens its doors to the global stage, this conference underscores our commitment to fostering partnerships, harnessing innovation, and unlocking the region's unexplored potential. This conference is driven by a bold and transformative vision enshrined in the Siaya County Integrated Development Plan (CIDP)—and transcends beyond local aspirations to align with global priorities, aiming to harness shared economic momentum to create enduring impacts for Siaya County, Kenya, and beyond.

Guided by an overarching aspiration aimed at Driving Sustainable Growth through Robust Trade and Strategic Investments, this forum brings together investors, policymakers, entrepreneurs, and development partners to explore the diverse opportunities Siaya County has to offer. With the county's rich cultural heritage, arable lands, vast blue economy, and dynamic human capital, Siaya stands poised to become a beacon of economic vitality in the region. Siaya is brimming with uncharted potential, a haven for investors ready to capitalize on its rich yet-to-be fully utilized resources.

This conference transcends the boundaries of a mere event; it serves as a definitive call to action. It challenges us to align our aspirations with strategic investments in key sectors such as agriculture, manufacturing, tourism, technology, mining, and infrastructure. By doing so, we aim to create meaningful employment, reduce poverty, and ensure inclusive and sustainable development for all. Through collaborative efforts and strategic partnerships, we seek to unlock the county's untapped potential, fostering a thriving ecosystem of innovation and investment. This approach will not only enhance the quality of wellbeing of our citizens but also position Siaya as a top-tier contributor to regional and global economic progress.

As we delve into insightful discussions, forge valuable networks, and chart transformative strategies, may we collectively work toward a future where Siaya becomes a thriving hub of innovation and prosperity. As a county, we extend our warmest welcome to all participants and invite you to be part of this remarkable journey. Today, we make an emphatic call to our partners to come through and let us seize this opportunity to turn vision into reality and redefine the socio-economic landscape of Siaya County.

Siaya International Trade and Investment Conference (SITICO)

Theme: *Positioning Siaya as an Investment destination: Transformative Growth through Trade and Investment.*

Hon. Grace Agola

CECM – Department of Trade, Cooperatives, Enterprise & Industrialization

FORWARD

It is my distinct privilege to present the Siaya County profile, a definitive guide to the boundless opportunities that position Siaya County as a frontier for transformative economic growth.

This profile is a testament to our unwavering commitment to fostering an environment where trade and investment thrive, driving sustainable prosperity for our people and the region at large. It serves as a roadmap for investors, entrepreneurs, and partners eager to tap into Siaya's rich potential, from its fertile lands and vibrant waters to its innovative spirit and skilled workforce.

This profile highlights a diverse array of investment opportunities that make Siaya a compelling destination for capital and innovation. From agriculture which is the cornerstone of our economy contributing 60 percent to the county's GDP, investors can explore, rice and cotton value chains, and fruit processing. The blue economy, anchored by Lake Victoria and rivers like Yala and Nzoia, offers prospects in cage fish farming, and cross-border water transport. Renewable energy and climate action present opportunities in green technologies and carbon trading, with Siaya positioned to host a nuclear power plant as part of Kenya's industrialization strategy. Tourism and hospitality beckon with projects like the Lake Kanyaboli and cultural sites celebrating our Luo heritage.

The health and education sectors invite investments in pharmaceutical manufacturing, vocational training, and sports development, while the digital economy offers potential in ICT hubs.

I extend my heartfelt appreciation to the dedicated team that meticulously compiled this profile, transforming complex data and visionary ideas into a clear and compelling resource. In particular, special appreciation goes to the SITICO Steering Committee, SITICO Project Committee, SITICO Secretariat, and Kenya Export Promotion and Branding Agency (KEPROBA). Their tireless efforts, guided by expertise and a shared commitment to Siaya's progress, have produced a document that not only informs but also inspires action. I also commend the County Treasury and all stakeholders whose collaboration and insights have enriched this profile, ensuring it reflects the true potential of Siaya as an investment destination.

I invite you to explore this profile and join us at SITICO 2025 to discover how Siaya's potential can translate into shared prosperity. Let us work hand in hand to turn vision into reality, building a future where trade and investment drive transformative growth for all.

SIAYA BACKGROUND

Siaya County is located in the western region of Kenya. It borders several counties: Busia County to the west, Kakamega County to the north, Vihiga County to the northeast, and Kisumu County to the east. To the south, it is bordered by Lake Victoria. The county's capital and largest town is Siaya.

POSITION AND SIZE

Siaya County is located in the western region of Kenya. It borders several counties: Busia County to the west, Kakamega County to the north, Vihiga County to the northeast, and Kisumu County to the east. To the south, it is bordered by Lake Victoria. The county's capital and largest town is Siaya.

The county covers an area of approximately 2,530 KM². It has diverse geography, including fertile agricultural lands along the shores of Lake Victoria and hilly terrains. Siaya County is known for its agricultural activities, particularly fishing, maize, and millet farming, as well as its growing tourism sector due to its cultural heritage, historical sites, and proximity to Lake Victoria.

DEMOGRAPHIC

- ◆ Population (2019 Census) - of 993,183 of which 471,669 are males, 521,496 are females, and 18 are intersex persons.
- ◆ Population Density - (Km²) 382
- ◆ 245,139 households with an average size of 4.2450 persons per household

PHYSICAL AND TOPOGRAPHIC FEATURES

Siaya County has altitudes ranging from approximately 1,140 meters to 1,400 meters above sea level. The county is characterized by a gently rolling topography, with lowlands near Lake Victoria and undulating

hills in the interior regions. Notable highlands include the Yala Hills, which offer scenic landscapes and biodiversity. Key water bodies in Siaya include Lake Kanyaboli, a part of the Yala Swamp ecosystem, and

several rivers such as the Yala, Nzoia, and Nyadorera Rivers. These rivers provide vital water resources for agriculture and sustain the local communities.

Ecological Conditions of Siaya County

Siaya County features diverse ecological zones, each with distinct characteristics and economic activities. The Lake Victoria Shoreline, located on the eastern side of the county, is dominated by wetlands, river systems, and rich biodiversity along the lakefront. This region is characterized by freshwater swamps, grasses, and occasional patches of tropical and subtropical forests. It supports a wide variety of fish species and aquatic life crucial for local livelihoods, as well as numerous bird species, including migratory ones, and small mammals.

Moving westward and northward, the Midland and Upland Zones present a mixed farming landscape with higher altitudes. These areas have a blend of shrubs, trees, and forested pockets around hills and valleys, where maize, beans, and horticultural crops are cultivated. The ecological diversity supports small mammals, birds, and

pollinators essential for agriculture.

In contrast, the Arid and Semi-Arid Areas in the eastern and southern regions face drier conditions, characterized by seasonal rainfall and periodic droughts. Sparse vegetation includes drought-tolerant grasses, shrubs, and acacia trees. Agriculture here relies heavily on irrigation, with millet, sorghum, and groundnuts being the main crops cultivated.

Climatic Conditions of Siaya County

Siaya County experiences a tropical climate influenced by its altitude and proximity to Lake Victoria, with a bi-modal rainfall pattern marked by two distinct rainy seasons. The county receives an average annual rainfall ranging between 1,200 mm and 1,800 mm, with variations across different regions. The long rains occur from March to May, bringing heavy precipitation, particularly in the highlands and areas along the lakefront, while the short rains from October to December provide lighter but still beneficial rainfall for agriculture. Dry periods are common from June to September and January to February, particularly in the southern and eastern areas.

Temperatures in the county are relatively warm year-round, ranging from 21°C to 30°C, with cooler conditions near Lake Victoria due to its moderating influence. The lake also contributes to high humidity levels, often exceeding 80% during rainy seasons, and gentle winds along the lakeshore driven by the temperature differential between the land and water.

Ecological and Climate Challenges

Siaya County, like many regions in Kenya, faces significant ecological and climate-related challenges that threaten the livelihoods of its

residents and the sustainability of its natural resources. Agriculture, a primary source of income for many households, is particularly vulnerable to these environmental pressures. The region's efforts to promote food security, protect ecosystems, and support rural communities are often hampered by the following critical issues:

- a. Droughts:** Frequent and prolonged drought periods strain local communities that depend heavily on agriculture, reducing crop yields and leading to water shortages.
- b. Soil Erosion:** The erosion of fertile soil caused by heavy rains, deforestation, and poor land management practices significantly hampers agricultural productivity and diminishes the county's food security prospects.
- c. Deforestation:** Despite having relatively low forest cover, Siaya faces deforestation challenges due to unsustainable practices such as charcoal production, logging, and agricultural expansion, leading to habitat degradation and reduced biodiversity.
- d. Climate Change:** Rising temperatures and erratic rainfall patterns disrupt local agricultural activities, strain water resources, and pose risks to community well-being and food systems.

Opportunities for Ecological and Climate Resilience

Siaya County presents significant opportunities to enhance ecological sustainability and climate resilience, essential for addressing environmental challenges and supporting livelihoods. Leveraging its diverse natural resources and strategic location by Lake Victoria, the county can implement initiatives to foster sustainable agriculture, energy use, and environmental restoration. Key areas of focus include:

- e. Agroforestry and Sustainable Agriculture:** Promoting climate-smart agriculture.
- f. Water Conservation and Irrigation:** The management of Lake Victoria's resources to ensure water availability during dry periods.
- g. Reforestation and Afforestation:** Restoring degraded land through reforestation projects, particularly in the highland areas and to improve forest cover.
- h. Climate-Resilient Crops:** drought-tolerant maize and millet) to ensure food security during dry spells.
- i. Green & Renewable Energy:** Harnessing the potential of renewable energy sources (solar & wind energy) especially at Got Akara for agro processing ability at CAIP.

PRODUCTS & SERVICES OBTAINABLE IN SIAYA COUNTY

AGRICULTURAL PRODUCTS

Oil Crops: Sunflower, Groundnuts, avocado, soya beans, palm trees

Tubers: Sweet Potatoes, Irish Potatoes, Cassava

Root Crops: Yams, Arrowroots

Fiber Crops: Cotton, Sisal, silkworm

Cereals: Rice, Maize, Sorghum, Millets.

LIVESTOCK AND ANIMAL PRODUCTS

Small Animals: Poultry (Chicken, Ducks, and Turkeys), Chicken, Ducks, Turkeys, Goats, Sheep, Rabbits

Large Animals: Cattle: Dairy Cattle, Beef Cattle, Donkeys, Pigs

APICULTURE

(Bee keeping) Siaya County is rich in wildflowers, trees (e.g., eucalyptus, mango, and neem), and crops that provide bees with the necessary nectar and pollen for honey production

AQUACULTURE

Fish farming (Tilapia, Nile Perch, and other fish species) in fishponds, fish cages and lake fishing

ENVIRONMENT AND CONSERVATION

Afforestation and reforestation and conservation.

ARTISANAL MINING AND SOIL CONSERVATION

Gold Mining & extraction, Sand and Stone

HANDICRAFTS AND ARTISANAL PRODUCTS

Wooden Carving & Traditional Crafts: beaded jewelry, pottery, and woven baskets

LOCAL VEGETABLE

Kale (Sukuma Wiki), Managu (African Nightshade), Elandu (Amaranth), Kunde (Cowpeas), Cabbage, Spinach, Crotalaria (Sama) and Pumpkin Leaves

TOURISM POTENTIAL

Got Ramogi Cultural Heritage, Lake Kanyaboli eco city opportunity.

VALUE ADDITION OPPORTUNITIES

Processed Products, Mango and Avocado Juice, Rice, Peanut and Honey Products

COMMERCIAL ACTIVITIES AND INDUSTRIES IN SIAYA COUNTY

Key Companies & Industries

 The main economic activities in Siaya County are crop farming (especially maize, millet, sorghum, cassava, and rice), fishing in Lake Victoria and local water bodies, livestock rearing, small-scale agribusiness, and retail and wholesale trade. Tourism also contributes to the local economy, with attractions such as Lake Kanyaboli, Got Ramogi, and the cultural heritage of the Luo community.

VOICES OF SIAYA COUNTY

Siaya County, located in the western region of Kenya, is a cultural hub rich in history and tradition. The people of Siaya, primarily from the Luo community, are known for their deep connection to music, dance, and art, which form an integral part of their identity. Visitors to Siaya are greeted with vibrant displays of these cultural expressions, as well as historical sites that honour the county's significant role in Kenya's political and cultural heritage. Among these sites are the famous Got Ramogi, a sacred forest, and the Jaramogi Oginga Odinga Mausoleum, both of which preserve the memories and stories of the past. These cultural landmarks make Siaya County a fascinating destination for those eager to explore the intersection of history, culture, and nature.

a. Traditional Dances, Music, and Art:

"Our dances and songs carry the essence of our ancestors. Every rhythm, every step tells a story of where we come from and who we are," says one elder from Siaya. The vibrant colours of local art and the beats of the traditional drums echo throughout the community, connecting the past and present.

b. Got Ramogi:

"Got Ramogi is a place of great spiritual significance. It's not just a forest, but a living testament to our ancestors' knowledge of healing and harmony with nature," explains a local guide. Visitors often speak of the calming energy that radiates from the site, making it an unmissable destination for those interested in Luo traditions.

c. Jaramogi Oginga Odinga Mausoleum:

"This mausoleum stands as a reminder of our struggle for independence and the role Jaramogi played in shaping Kenya's destiny. He was more than a leader—he was a symbol of resistance and hope," shares a historian from Bondo. The mausoleum attracts many who wish to honor the memory of this iconic figure and learn more

LIST OF BANKABLE PROJECTS FOR PROFILING ACROSS ALL THE SUB - COUNTIES WITHIN SIAYA COUNTY

NO	NAME OF PROJECT	INVESTMENT AREAS	PROJECT ESTIMATED COST (KSHS)	LOCATION	EXISTING OPPORTUNITIES IN THE COUNTY	EXISTING GAP	NATURE OF INVESTMENT	IMPLEMENTING PARTNERS
